## 24-hour Urine Oxalate Excretion

The information your doctor receives from your test is only as accurate as the collection procedure you follow. Therefore, it is important that you collect the urine in the following manner:

Before starting the urinary collection add 10 mL of **Hydrochloric Acid** given by the outpatient clinic.

1. You must begin all 24-hour urine collections with an empty bladder. When you wake up the morning of the day the collection is to begin, empty your bladder, discard the urine and note the time.
2. Collect all urine throughout the day and night. **Keep samples refrigerated at all times unless otherwise specified.**
3. The next morning wake up at the same time you did the day you began the collection, empty your bladder and add this to the urine you collected the day before. This completes the 24-hour urine collection.
4. Return specimen to the lab site as soon as possible after collection.

### ATTENZIONE

The test tube contains hydrochloric acid.  
Below are the dangerous characteristics:

#### Hazard Statements:

**H314: Causes severe skin burns and eye damage.**

Attention and first aid measures:

- o Do not ingest.
- o Do not leave the container within the reach of children.
- o Handle with care, store on safe surfaces to avoid accidental drops.
- o In case of accidental contact with the skin, wash with plenty of water and immediately remove contaminated clothing.
- o In case of contact with eyes, rinse thoroughly with water, remove any contact lenses if it is easy to do so, continue rinsing. Go to the nearest emergency room.
- o In case of accidental ingestion, contact the nearest emergency room.

If you enter the emergency room, bring this form with you.
